

Assignment-15

Problem Statement: Create a Serverless computing service

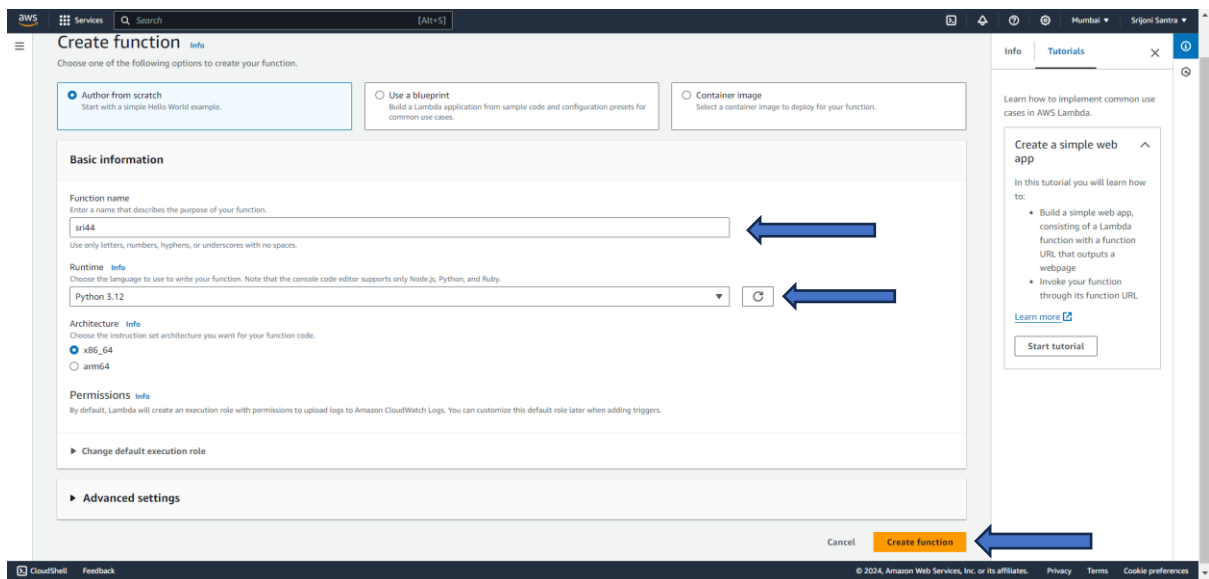

Step 1: Login to the console and search Lambda, then click on it.

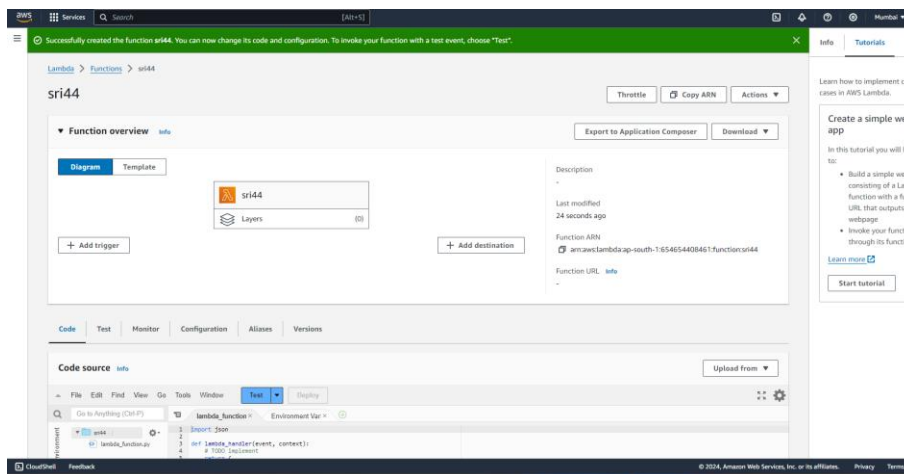

Step 2: Click on “Create function”

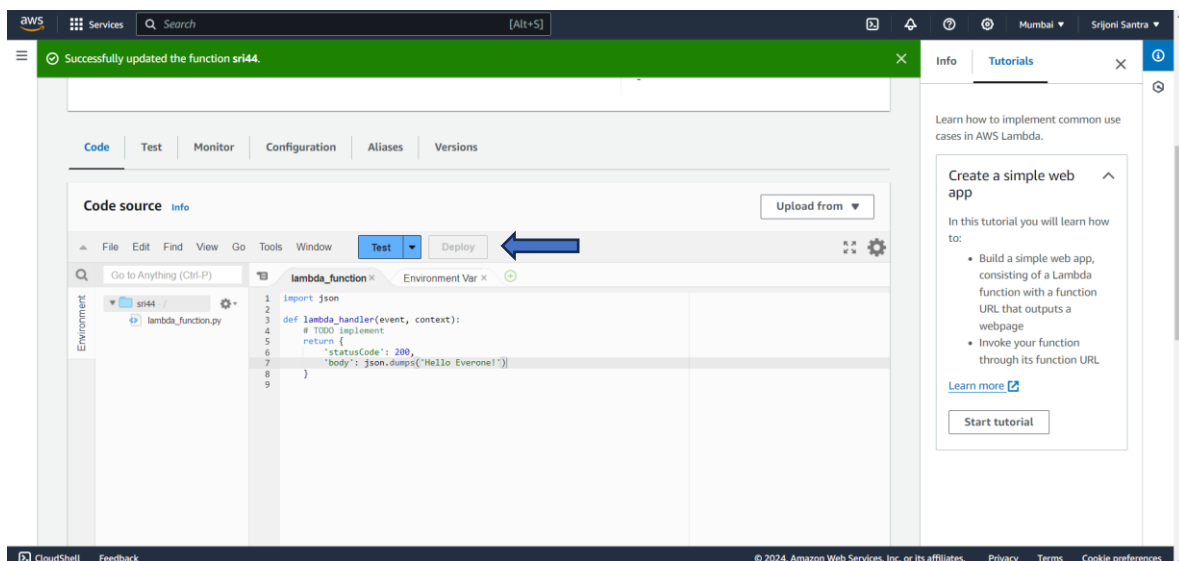

Step 3: Give a function name, choose the language to use to write the function and click on the “Create function” button.

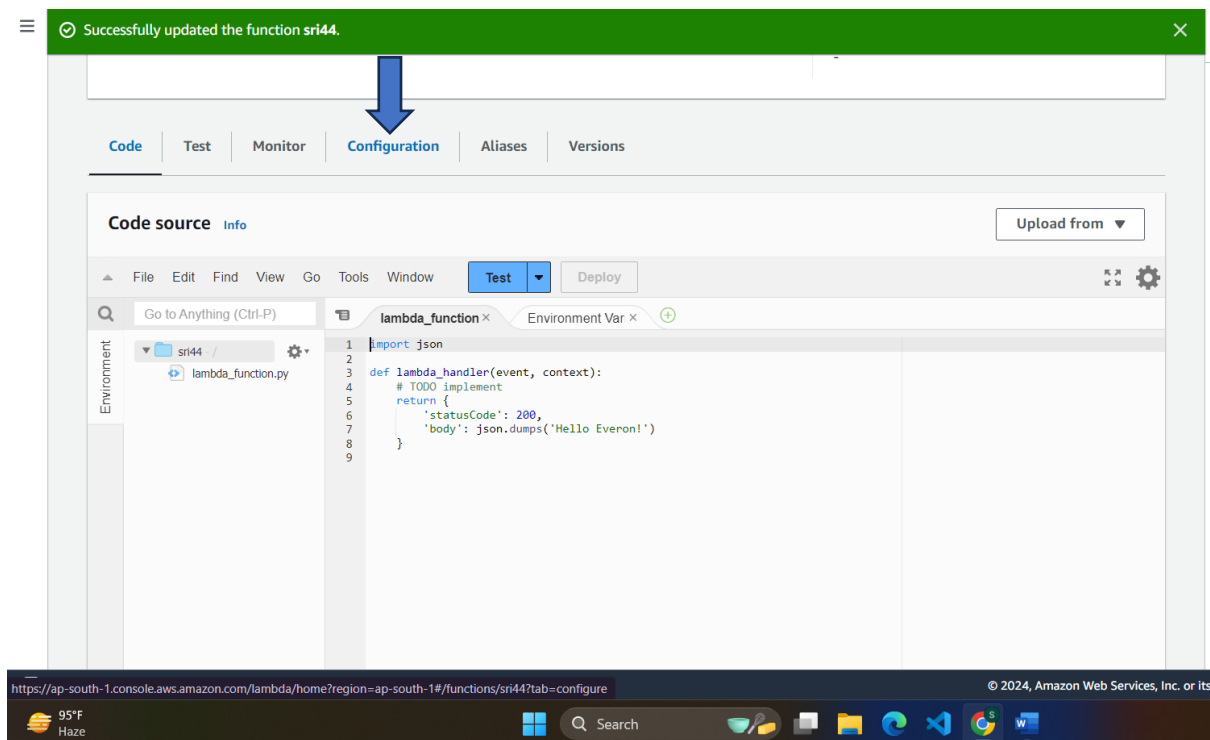

Step 4: Function Created Successfully.

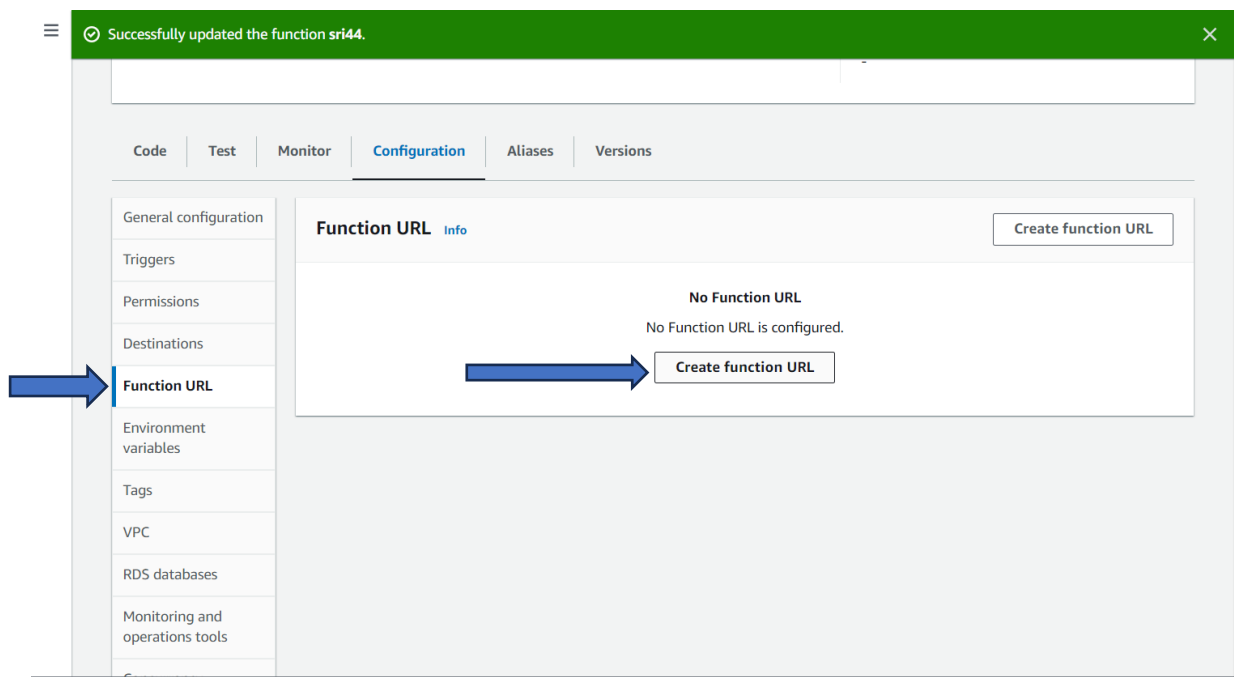

Step 5: Now, if we want to change the code then change it and click on deploy then the code will be updated.

Step 6: For URL click on the “Configuration” option

Step 7: Click on the “Function URL” option & after that click on “Create function URL”

Step 8: In “Auth type” choose the option “NONE” & then click on the “Save” button.
